

## Alexander Nubia Expands Team

**March 20, 2015** - Alexander Nubia International Inc. (TSX-V:AAN) (the “**Company**” or “**Alexander Nubia**”) is pleased to announce the appointment of Giles Baynham as Director – Corporate Development. Mr. Baynham has been a non-executive member of the Company’s Board of Directors since listing in October 2010, and is now increasing his contribution to the Company’s activities by taking on this additional role.

Chief Executive Officer, Alexander Massoud stated, *“I am very pleased that Giles is taking on a more active role at Alexander Nubia. His extensive experience in equity capital markets and debt finance is complimented by in-depth technical knowledge as a mining engineer. Combined with his public company experience I expect he will contribute greatly to the advancement of the pipeline of projects within Alexander Nubia’s land package.”*

### **Giles Baynham**

Mr Baynham is a former banker with significant debt and capital markets experience. He started his career as a Mining Engineer with Rio Tinto, before working at various financial entities including the Industrial Bank of Japan/Mizuho Corporate Bank, NM Rothschild & Sons, and Endeavour Financial. In 2008 he was a co-founder of CB Gold Inc, which holds exploration and mining operations in Colombia.

### **About Alexander Nubia International Inc.:**

Alexander Nubia (TSX-V: AAN) is in the business of exploring for and developing of economic gold and copper deposits in the Central Eastern Desert of the Arabian-Nubian Shield (ANS). The Company’s 100%-owned concessions, Abu Marawat and the Fatiri, combined cover 2,772 square kilometres of underexplored ground. Evidence of gold and copper mining on the concessions dates the many surface workings to pre-historic (Copper Age) and Old Kingdom (Pharaonic), through Ptolemaic and Roman and into Early Arab times. Several historic gold mines and numerous gold showings and gossans occur within the two concessions.

The Eastern Desert is host to a number of historically-significant gold mines. The world’s oldest gold mine map for Wadi Hamad, the Turin Papyrus Map, was prepared for Ramesses IV; it dates to 1,160 BC and describes the *wadi* (dry river bed) routes to these important gold mine sites. The Sukari gold mine, controlled by Centamin [TSX: CEE] was a historical gold mine, dating back to New Kingdom/Ptolemaic and Roman age. (Source: Klemm and Klemm (2013): Gold and Gold Mining in Ancient Egypt and Nubia, Springer-Verlag, 649 pp) Sukari, located 300 km to the South of Abu Marawat Concession, contains 7.7 Moz of proven and probable gold reserves at 1.05 g/t Au. Gold production began at Sukari in 2009; forecasted production for 2015 is 420,000 ounces of gold at a cash cost of \$700 per ounce. Gold recovery is 88% and head grade is 1.40 g/t Au. Gold mineralization at Sukari has been intersected to depths of 1,350 m below the *wadi* surface (source: Centamin website).

Abu Marawat and the Fatiri concessions are underlain by a Proterozoic-aged Pan-African greenstone belt of the ANS, which has been intruded by at least two main ages of granodiorite intrusions. Much of the gold-sulphide mineralization is of the mesothermal (orogenic), quartz-carbonate vein-type and is associated with major NNW and NE trending shear-zones. Alteration includes epidote (distal), carbonate (intermediate) and sericite-quartz (proximal). Similar geological settings include the greenstone belts of the Yilgarn of Western Australia, the Birimian of West Africa and the Abitibi in Quebec, Canada.

The Arabian-Nubian Shield (ANS) covers both sides of the Red Sea and includes parts of Egypt, Saudi Arabia, The Sudan, Eritrea and Ethiopia. Significant VMS deposits in the ANS include Barrick [TSX: ABX] and Ma'aden 50:50% JV of Jabal Sayid in Saudi Arabia, Nevsun [TSX: NSU] Bisha Main and Harena in Eritrea, La Mancha's Hassai and Hadal Awatib in the Sudan, and Sunridge [TSX: SGC] Emba Derho, Debarwa and Adi Nefas in Eritrea. An example of the size and grade of these deposits is La Mancha's Hadal Awatib East, which has 54.2 Mt of Indicated Resources in primary sulphide mineralization at grades of 1.0% Cu, 1.11 g/t Au and 0.8% Zn, and 13.25 Mt of Inferred Resources at 1.2% Cu, 1.0 g/t Au and 0.5% Zn and has a strike length of 2,500 m, mineralization widths of up to 100 m, has been drilled to 400 m and geophysics-projected depths of mineralization to 900 m. Cautionary notes: The QP has been unable to verify the information and that the information is not necessarily indicative of the mineralization on the Company's property. Mineral reserves and or resources present on these VMS properties does not imply similar resources or mineralization will be identified on the Company's properties.

The Company's land package is located some 400 km southeast of Cairo and is enhanced by expanding infrastructure, including access to a four-lane highway, railway right-of-way, high-voltage (capacity 220kV) power lines, and nearby major cities; Qena, on the Nile River, 70 km to the West, and Port of Safaga, on the Red Sea, only 50 km to the East.

**Qualifying Person:**

The technical information contained in this News Release was prepared by Danae A. Voormeij, MSc, PGeo, Exploration Manager for Alexander Nubia Inc. Ms Voormeij is a qualified person under CIM's National Instrument 43-101 Standards of Disclosure for Mineral Projects.
